Grid Frame Installation Instructions - UC90 Bracket

UC90 PARTS KIT

QTY	DESCRIPTION
1	UC90 Base
4	UZSCREWW
5	UZWNUTA
1	UZSCREWZ
1/Order	JX INSTRUCTION

Figure A

Bits Required:
Phillips

The easiest way to install these UC90 brackets is by loosely attaching the screw UZSCREWW through the bracket and into nut UZNUTA so that the end of the screw is no more than flush with the back of the nut. Do this with all 4 screws as shown in Figure A.

This will allow enough movement so that you may install the UZNUTA's into the two slots in the bottom rail of the Grid frame. With the Grid Frames close to it's position, first place the bottom 2 nuts in the bottom slot of each perpendicular Grid frame slowly tilt the bracket up while arranging the top 2 nuts to slip into the top 2 slots on each frame. Place the Grid frames in the exact position tighten 4 screws as shown in Figure B.

Figure B

Note: to finish installing Fin wall (Frame 90° off Spine wall), all electrical, tiles and Top cap in Spine wall must first be finished.

Remove 4 screws in Top Caps in Fin walls, set parts aside to be installed after Fin wall frames, electrical and tiles are installed. Take (1) UZSCREWZ and (1) UZNUTA to attach the top of frame through the Mid Cap into Top Cap of the Spine wall as shown in Figure C.
