The intent of this document is to summarize how Enwork complies with the Healthier Hospitals Initiative (HHI) for Safer Chemicals.

Scope of Products Covered:
All training tables, conference & collaborative tables, storage products, and workstations comply, unless noted below.
At time of quote and order, it must be noted that non-PVC edgeband must be utilized.

Exceptions:
Veneer and exposed-wood products do not comply. Seating products have not been tested.

Formaldehyde:
Formaldehyde is a colorless, flammable gas at room temperature, used mainly to produce resins used in composite wood products (e.g., plywood, particle board, medium density fiberboard) and as an intermediate in the synthesis of other chemicals and in some fabrics.

Enwork has completed testing of these products in accordance with SCS Indoor Advantage Gold, confirming that Enwork products, unless otherwise noted, pass the Low Emitting Materials test for formaldehyde.

Per- and poly-fluorinated compounds (PFCs):
PFCs are defined in this guidance as a category of compounds that includes long and short chain per- and poly-fluorinated alkyl compounds and fluorinated polymers. PFCs are widely used to make everyday products, including furnishings and fabrics, more resistant to stains, grease, and water.

No components and/or products contain stain- or water-repellent treatments that contain a PFC, unless otherwise noted.

Polyvinyl chloride (PVC):
Polyvinyl chloride (PVC), or vinyl, is a synthetic thermoplastic material made by polymerizing vinyl chloride. The properties of the material depend on the additives, including plasticizers.

It is important to note during the quote and ordering processes that non-PVC materials are to be used. This specifically refers to edgeband.

Antimicrobials:
Antimicrobials are substances or mixtures of substances designed to destroy or suppress the growth of harmful microorganisms.

Enwork table products do not contain Folpet or other antimicrobials.

Flame Retardants:
Flame retardants are chemicals/compounds added to materials such as plastics, textiles, surface finishes, and coatings that inhibit, suppress, or delay the production of flames to prevent the spread of fire.

Enwork table products listed above in Products Covered do not contain Antimony Oxide or other flame retardants.

Declaration:
The above information is provided by Enwork, as confirmation that the training tables, conference & collaborative tables, storage products, and workstations described herein meets the criteria for the Healthier Hospitals Initiative (HHI).
