![#10 x 1" Screws](image)

2) Tools and Supplies Required

![Drill/Driver](image)
![Phillips Driver Bit](image)
![Square Bit](image)
3) ASSEMBLY:

Lay the screen on a flat, clean surface. The screw locations will be marked with dots on the Acoustic Screen. (Fig 1)

Align the KTM-1906 Bracket over the marked hole locations of the Acoustic Screens and attach using the provided #12 x ½” Pan Head Phillips Drive Screws. (Fig 2)

Note: DO NOT OVERTIGHTEN SCREWS. Set Drill to slowest speed and the lowest torque setting.

Position the Rear Screen assembly to the rear of the worksurface, on center. (Fig 3)

Note: This step may require 2 people.

The Fixed Mount Bracket must not interfere with any part of the table understructure. This may require the understructure to be re-positioned.
Once the screen is in the desired position, attach the Fixed Mount Bracket to the underside of the worksurface using the screws provided.

Note: Use the correct length screw depending on the worksurface thickness: #10 x 1” or #8 x ¾”.

Assembly complete.
